Problem Statement

When we need a system that purely in house and with no security risk
Our Solution

We built a SPA application for small organizations to communicate without any risk of security
Overview

This is a single page application by using MVC Angular. The purpose of this app os to provide communication solution to small organization with less risk of security. It is very easy and light-weight project that can solve communication problem of small organizations.

# Requirements

Npm install
Node.js
Sql Server

Project Description

Realtime-Private-Chat-using-Angular-Nodejs-and-Mysql

As the title suggests, this app is private chat application, In which front-end is built-in AngularJs(version 1.6.5). This is SPA application, which uses UI-bootstrap.

Server-side is written in Nodejs (version 8.9.3) and Mysql (version 5.7.21-log).

User Interface
